CYBERBEAK
Custom software & AI development

Vehicle Auction & Remarketing Platforms

Branded, real-time bidding platforms for dealerships, remarketing firms and salvage operators, engineered around how your auction actually runs.

WHAT WE BUILD

Real-time bidding engine
WebSocket bidding, anti-sniping time extensions and configurable increments across concurrent live lots.

Vehicle lot & VIN management
Bulk VIN import, condition reports, image galleries, reserve logic and auction scheduling.

Buyer verification
Document upload, bid deposits and approved-buyer controls so only verified buyers bid.

Settlement & invoicing
Buyer's premium, VAT/tax handling and automated invoices across currencies.

White-label branding
Your domain and brand, buyer portal end to end.

Analytics & reporting
Participation, hammer rates, vehicle velocity and revenue by auction.

HOW WE WORK

1 Auction Platform Discovery
Paid scoping: current process, workflow mapping, architecture and a fixed-price proposal.

2 Architecture & design
Data model, bidding engine design and integration points agreed before production code.

3 Build & integrate
Weekly sprints with live staging access and a working demo every week.

4 Launch & support
We stay on through go-live and the weeks after.

START WITH A PAID DISCOVERY

From $2,500

Credited in full toward the build if you proceed. You receive:
- A working session on your current process, volumes and buyer base
- Workflow map from seller intake to settlement
- Technical architecture: bidding engine, data model, integrations
- Phased roadmap, fixed-price quote and realistic timeline
- Wireframes of the critical screens and a written risk assessment

WHY CYBERBEAK

Senior engineers from day one, direct communication with no account-manager layer, full IP transferred on delivery, weekly demos and git access. Rated 5.0 on Clutch (clutch.co/profile/cyberbeak). We have built auction and logistics platforms for operators in the UAE and work with clients in the UK, USA and Canada.
